

Project Title

Computer Graphics & Animation Lab (CSE 444)
Project Final Report

Section: (Write your section)

Group No.: (Write your project group no)

Assigned Project No.: (Write your project serial no.)

Submitted By:	
Name1	ID1
Name2	ID2
Name3	ID3

1. Project Requirements:

Briefly describe the requirements of the project.

(e.g. The primary goal is to render a 3D scene of a building and a playground using Three.js, incorporating custom shaders, lighting, perspective projection, textures, animations, and interactive controls.)

2. Software Platform:

List the tools and technologies that you used.

3. Project Features:

Enlist the features of your project and describe how each feature works.

3.1 Models and Texture Mapping

Write brief descriptions about the models and choice of texture mapping e.g., using a brick or concrete texture map for the building and a grass/sand texture for the playground.

3.2 Key Interaction

Explain how you implemented keyboard interaction and specify the usability.

(e.g. how the WASD or Arrow keys manipulate the camera's position vectors to move it around the building.)

3.3 Mouse Interaction

Explain how you implemented mouse interaction and specify the usability.

3.4 Animation

Explain how you implemented the required animation.

3.5 Lighting

Describe the lighting model you used (e.g., Point or Directional) and theory behind how it works.

3.6 Custom Shaders

Briefly explain the vertex and fragment shader logic.

Attach a table with all your required/additional features and classify them into three categories: Implemented, Partially Implemented and Not Implemented.

#	Features	Status
1	Feature 1	Implemented
2	Feature 2	Partially Implemented
3	Feature 3	Implemented
4	Feature 4	Not Implemented
5	Feature 5	Partially Implemented

Table 01: Project Feature Table

4. Snapshots:

Provide some snapshots of your project indicating how each feature works.

5. Contribution:

Specify which part is done by whom in this section.
